PAWHAVEN

Pet Adoption Website — Project Report

A welcoming, responsive website concept that helps visitors browse adoptable pets and submit demo adoption requests.

Project Overview

PawHaven is a front-end pet adoption website developed using HTML, CSS, and JavaScript. It displays pet profiles and provides search, category filters, adoption request forms, and a contact form. Form submissions are stored in browser localStorage for demonstration.

Objectives

- Create an attractive and mobile-responsive pet adoption landing page.
- Display pet profiles with photos, names, ages, breeds, and descriptions.
- Allow visitors to search and filter pets by animal type.
- Practice handling forms and user interactions with JavaScript.
- Store demo submissions locally in the browser.

Technologies Used

HTML5: page structure, sections, cards, forms, and navigation.
CSS3: responsive layout, typography, colors, cards, modal, and mobile navigation.
JavaScript: pet search/filtering, modal interactions, form validation, and event handling.
localStorage: stores demo adoption requests and contact messages in the browser.

Main Features

- Responsive hero section, navigation, pet gallery, adoption steps, mission section, and contact form.
- Search pets by name, breed, or personality.
- Filter pets by Dogs, Cats, Others, or All pets.
- Open an adoption request form for a selected pet.
- Save form submissions locally and show confirmation messages.
- Mobile-friendly navigation and responsive pet cards.

How to Run

1. Download and extract the project ZIP.
2. Open the **PawHaven_Pet_Adoption_Project** folder.

3. Double-click **index.html** to open it in a modern browser.
4. Try the pet filters, search box, and adoption/contact forms. No backend or installation is required.

Limitations and Future Scope

PawHaven is a demonstration website. Forms save data only in the current browser and do not contact a real shelter. Pet photos and fonts are loaded from external URLs. Future versions could add a real database, shelter accounts, verified listings, and email notifications.

Project Description (under 350 characters)

PawHaven is a responsive pet adoption website developed using HTML, CSS, and JavaScript. It lets users explore pets, search by name, filter by animal type, and submit adoption requests. The site includes a photo gallery, contact form, and localStorage for saving demo submissions.

Conclusion

PawHaven demonstrates how front-end web technologies can create a friendly, interactive pet adoption experience. Its responsive design, search/filter features, and local browser storage make it suitable as a beginner web development project.
